### DETAILED ACTION

1. Claims 43-48 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear how a "harmonic conversion cell" operates using rare gases to tune a wavelength.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Corkum et al. in U.S. Patent Application Publication No. 2003/0111447 in view of Zait et

Art Unit: 1725

al. in WO 03/022506 A1 and Karasaki in Japan Patent No. 63-49,388. Corkum discloses repairing defects in lithographic photomasks using femtosecond laser pulses and inspecting the mask using a CCD camera but not tuning the wavelength to the specific material being ablated. Zait et al. teaches that photomasks have multiple layers (e.g. see page 10). Karasaki teaches tuning the wavelength to the wavelength corresponding to the material that maximizes absorption and minimizes reflection . It would have been obvious to adapt Corkum et al. in view of Zait et al. and Karasaki to provide tuning the wavelength to optimize cutting of the desired material to be cut while minimizing damage to the other materials on the substrate.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Drozdowicz et al. has a mask repair system with a harmonic converter (made of a crystal) to adjust the wavelength of the laser beam.
